Speed	++	+++
Strength of sensor heating	++	+++
Batterie operation	yes	yes
Accu (charge with USB)	no	yes
Tank- and Seatsupport	no	yes
Cage	Bag	Case

Description

Both – synX classic and synX profiline provide a precise synchronization result and work reliably.

The synX classic is designed for ambitious amateurs and smaller workshops.

The synX profi line is particularly well-suited for frequent use and offers more convenience in use.

It differs from the synX classic in terms of speed, even more accuracy and special features for the harsh workshop routine.

While you have to manually switch the display attenuation and resolution when synchronizing with synX classic, synX profi line does this work automatically thanks to AutoZoom and AutoRange. This saves the workshop professional the valuable time. A higher measurement resolution of 1 mbar numeric and 0.25 mbar graphically provides the greatest possible accuracy.

For permanent availability provides extra strong sensor heating and in addition to battery operation is battery operation with voltage monitoring possible (charging via USB with included power supply).

A tank and seat cover guarantees non-slip grip in optimum reading position. The whole professional set is packed in a sturdy plastic case.
